Further Information

The Network of Industrial Economists is the oldest UK network for academic economists and practitioners with interest in industrial economics and policy. Having been established in the 1970s it has evolved as a forum for discussion about academic research but also for interactions between members from academia, business, consultancy and government agencies.

The group of **Industrial Economics at Loughborough University** spans across both theoretical and empirical research, with applications to competition policy, consumer policy, and regulation issues. The current theoretical research of the group members relates to the areas of advertising, pricing, consumer behaviour, collusion, mergers, pharmaceuticals, and research and development. On the empirical side, our research has analysed energy markets, supermarkets, and alcohol pricing.
